Blockchain Product & Solutions | Technical Project Manager

SUMMARY

Technical project and product leader with experience turning blockchain infrastructure, applied AI, and enterprise delivery needs into usable systems. Built a live non-custodial Solana marketplace spanning Anchor programs, escrow, wallet authentication, event-driven indexing, encrypted fulfillment, IPFS media, and RPC reliability. Brings cross-functional experience across frontend, backend, data, AI/ML, DevOps, security, reporting, and regulated healthcare environments.

CORE COMPETENCIES

Blockchain: Solana, Anchor, Rust, wallet-signature authentication, PDAs, non-custodial escrow, on-chain settlement, RPC strategy, indexers, EVM/L2 ecosystems, bridging and cross-chain risk.

Architecture: Trust boundaries, source-of-truth design, read models, idempotent synchronization, APIs, event flows, privacy, observability, ADRs, reliability, and production hardening.

Product & Delivery: Discovery, requirements, roadmap-to-capacity alignment, Agile delivery, cross-team dependencies, CAB, release governance, risk escalation, and executive communication.

AI & Automation: RAG-assisted triage, Atlassian Rojo, Confluence, Jira automation, Flux Kontext, LoRA adaptation, Modal inference, and AI-assisted engineering workflows.

Technical: Next.js, React, TypeScript, Node.js, PostgreSQL/Supabase, Redis, Helius, IPFS/Pinata, EasyPost, Sentry, Better Stack, Power BI, SQL, GitHub, and AWS fundamentals.

PROFESSIONAL EXPERIENCE

Technical Project Manager | AssistRx - Orlando, FL (Remote) Aug 2024 - Present

- Own delivery across reporting, ETL, and AI/ML squads in a regulated healthcare environment, from discovery and sizing through testing, validation, sign-off, and production rollout.
- Architected RAG-assisted DevOps triage that retrieves ticket history and approved Confluence guidance, summarizes ownership and dependencies, and prepares next-step recommendations for human review; modeled a reduction from 45-60 minutes of manual preparation to 10-15 minutes assisted.
- Built Atlassian-based operating solutions using Jira, Confluence, Rojo, dashboards, and automation for reporting, recurring tasks, release readiness, dependencies, and stakeholder communication.
- Designed sprint-health and delivery dashboards surfacing blockers, aging work, throughput, dependency risk, and release readiness for engineering, product, QA, operations, and executives.
- Run CAB and release governance under audit and compliance constraints, coordinating intake, readiness, approvals, rollout, and follow-up automation.
- Partner with product owners on refinement, acceptance criteria, capacity alignment, risk, and continuous PDLC improvement.

Technical Project Manager | Lithia Motors - Medford, OR (Remote) Sep 2023 - Jun 2024

- Led Agile transformation across two distributed data teams; reduced cycle time 15% through backlog hygiene, delivery coaching, and explicit work-in-progress controls.
- Improved planning and dependency visibility in Azure DevOps using delivery metrics and retrospectives to surface risks and guide stakeholder decisions.
- Facilitated Agile workshops across product, engineering, and data functions.

SAFe Scrum Master | CVS Health - New York, NY Oct 2021 - Aug 2023

- Coached four Scrum teams across regulated healthcare initiatives, improving velocity approximately 20% through stronger planning, refinement, and continuous improvement.
- Facilitated PI planning, dependency reviews, ceremonies, and stakeholder alignment across distributed teams.
- Built Rally dashboards that gave leadership real-time initiative health, delivery risk, and dependency visibility.

SELECTED BLOCKCHAIN PRODUCT

Set (formerly sl0p.exchange)

Founder, Product & Architecture Lead | Live Solana fashion marketplace

- Defined the product thesis: if crypto is borderless and trust-minimized, its marketplaces should reflect that ethos while giving people a practical reason to use crypto.
- Designed and built Solana/Anchor marketplace programs for profiles, listings, purchases, escrow, shipment, delivery, refunds, and settlement using deterministic PDA accounts.
- Separated authoritative on-chain state from a rebuildable PostgreSQL read model for fast search, dashboards, fulfillment, notifications, and marketplace operations.
- Built a TypeScript indexer with WebSocket ingestion, transaction decoding, backfills, checkpoints, and reconciliation; added stale-state protection and idempotent synchronization across application and indexer paths.
- Implemented wallet-signature authentication, HTTP-only sessions, owner-scoped authorization, X25519-encrypted shipping data, encrypted tracking, and service-controlled private tables.
- Integrated EasyPost carrier reconciliation, IPFS media with gateway fallback, Redis caching, Sentry telemetry, Better Stack uptime monitoring, and multi-provider Solana RPC fallback.
- Produced ADRs, API inventories, data-flow reviews, isolated PostgreSQL integration tests, production preflight checks, and operational hardening roadmaps.

Designed evolution - not yet shipped

International product access with SOL-to-local-currency display and English-canonical multilingual content; native-SOL V2 escrow; and cross-chain dispute resolution connecting Solana to Kleros on Arbitrum through LayerZero.

SELECTED AI PRODUCTS

LookLab by Ember Niche

Product exploration spanning AI image editing and interactive 3D configuration

- Bhori: built an AI try-on experience for aviator sunglasses using image-to-image references rather than conventional text-to-image generation; adapted Flux Kontext with a product-specific LoRA for frame identity plus frame and lens color control.
- Designed the Bhori workflow from product hypothesis through prompt contract, customer interface, Modal-hosted inference, WebSocket progress, and generation failure handling.
- INFY: built a browser-based configurator for Ember Niche's first 3D-printed frame using a multi-mesh GLB separated into customizable parts, Three.js/WebGL interaction, and matte color visualization.

BLOCKCHAIN PERSPECTIVE

Active on-chain since 2018 across EVM mainnet, major L2s, and Solana. First-hand experience with self-custody, bridging, DeFi protocols, wallet approval risks, phishing, cross-chain trust assumptions, and multiple market cycles informs product and architecture decisions around account ownership, custody, settlement, and user safety.

CERTIFICATIONS & EDUCATION

Certified SAFe 5 Scrum Master | Certified SAFe 6 Product Owner / Product Manager | AWS Cloud Practitioner in progress

B.A. Philosophy - John Jay College of Criminal Justice, New York, NY
